2007 Land Cover Classification Block R4C1

This map displays detail of 2007 land cover classification by analysis block within the project area. Data displayed were created through a combination of techniques including remote sensing and, for wetlands, terrain modeling. These data were created for analysis of land cover over large areas and were not intended to be used to make critical area determinations on a parcel by parcel basis. All critical area site information must be independently verified. Please refer to Snohomish County's Critical Areas and Shorelines Monitoring Status Report, March 2012 for more information about this dataset. www.surfacewater.info
