

Welcome to the Miner's Corner Sand & Water Garden!

What Is It?

The Sand & Water Garden is an interactive universally accessible area for play, learning and discovery. The unique design allows people of all ages and abilities to enjoy it.

Fun Facts

- The garden is fed by rain from building roofs, the sport court, and the surrounding landscape.
- Water is from non-pollution generating surfaces – the parking lot flows to a separate filter & pond near the park entrance.
- Water flows through the garden and soaks into the ground, slowly making it's way to North Creek.
- Keeping the sandbox dinosaur uncovered, by moving sand to the upper sandboxes, helps maintain the garden and stream!
- Many creatures are sure to make the garden their home. What kind of animals do you think might live here?
- The garden changes with the weather and seasons – come back often to see what's happening!

The Garden Is Designed To:

- Give all visitors an opportunity to experience the abundance of life found in wetlands.
- Allow interaction with moving and still water.
- Encourage open-ended creative play & exploration.
- Engage the senses and allow up-close interaction with nature.
