

Road closure for culvert replacement on Waverly Drive

The Surface Water Management Division of Snohomish County Public Works will replace a failing, undersized culvert on Waverly Drive near the intersection of Maple Road, south of Snohomish and east of SR 9. The new, larger culvert will reduce road flooding and associated damage. The 12-foot-wide culvert conveys Evans Creek and is designed to meet state guidelines for fish passage. Construction is anticipated for summer 2015.

It is expected that Waverly Drive will be closed for a two-week period between July and October to allow a contractor to install the culvert and restore the roadway. Drivers will follow signed detours to get around the work zone.
