

Prioritization/Sequencing for Subcommittee Discussion at March 14 IC Meeting

	Ecosystem Components and Human Wellbeing Components (write in once determined from Subcommittee Discussion A)									
Questions to Consider										
Which parts of the ecosystem are most important for the health of the LIO ecosystem and people?										
Which components are umbrella groups, wherein their protection would indirectly protect many other species in the ecological community?										
Which components are currently the most threatened or degraded?										
Which components are in good condition now but face future threats?										
Which components are priorities in the near term due to the status of threats/opportunities/other considerations?										
Which components are priorities over the longer term due to the status of threats/opportunities/other considerations?										
Can the LIO contribute directly to recovery of one of the regional Vital Signs?										
Is the component critical in this LIO but not a regional priority?										

	Ecosystem Components and Human Wellbeing Components (write in once determined from Subcommittee Discussion A)									
Other Prioritization Considerations										

Summary Rating Low, Medium, High, or Very High
