Snohomish County
Buildable Lands Support
Stakeholder Workshop
November 25, 2019

ECONorthwest
ECONOMICS • FINANCE • PLANNING
1. What land in the UGAs could be developed?
2. What density actually happens in each zone?
3. What is the land capacity as of 2011?
4. How much of the land capacity is likely to be available for development by 2025?
5. What are the growth targets?
6. Is there enough land capacity?

GIS Mapping Approach

Example from the 2012 Buildable Lands Report

The next five slides show the GIS mapping approach used by the county’s buildable analysis in the South Everett area for the 2012 BLR (includes both city and county unincorporated Everett jurisdiction)

**Background**

- Legislature passed updates to the Review and Evaluation Program in 2017 (E2SSB-5254)
- Dept. of Commerce developed updated Buildable Lands Guidelines
- Snohomish County needs to update buildable lands methodology to meet new requirements
Key Issues to Address

- Review of methods and updated guidance related to:
  - Definitions of land classifications (specifically related to redevelopable land)
  - Market factor assumptions
  - Infrastructure gaps
  - Reasonable measures
Step 1: Evaluate methodological issues and review recent development trends.

Step 2: Identify and describe options for updating methods and assumptions and the trade-offs associated with each option.

Step 3: Develop a proposed methodology for updating the County's buildable lands analysis.
Meeting 1: Project Orientation
- Overview of work program
- Identify key issues to address

Meeting 2: Issue Identification
- Review previous capacity methods
- Present preliminary data analysis on development trends.

Meeting 3: Methods Alternatives Review
- Present proposed options
- Refine approaches to updating the methodology

Meeting 4: Methods Implementation
- Review proposed revisions to methodology and reasonable measures
Other Stakeholder Outreach

- Stakeholder Workshop
  - Following SCT PAC subcommittee meeting 2 (today)

- Elected Official Briefing (SCT Steering Committee)
  - After SCT PAC subcommittee meeting 4
Preliminary Findings
Validation Study

Validation Study Approach

- **Purpose:** Review and compare estimates from the 2012 Buildable Lands Report (BLR) with recent development history data

- Includes SF, MF, Mixed-Use projects within the UGA (cities and unincorporated UGAs) during 2013-2018 time period

- Development projects included where project site boundaries corresponded to economic unit/parcel boundaries used in the 2012 BLR

- 220 Development projects included

- Didn’t include projects in which:
  - Project boundaries split 2012 economic unit/parcel boundaries
  - Development is in phases (some of which were incomplete)
  - Pending land status was assigned in 2012 BLR
  - Condominiums were created (no net increase in units)
Draft Validation Study – Sample Project Page

Plat No. 11639 - Woodland Trails

- UGA: Southwest County UGA
- Jurisdiction: City of Mill Creek
- Future Land Use Classification: ULDR
- Zoning Designation: LDR
- Actual Development Type: Redeveloped
- Improvement-to-Land Ratio (2012 BLR): 0.154

Draft Results: Housing Unit Yields by City/Unincorporated UGA

City/Unincorporated UGA | Actual as Percent of Predicted
--- | ---
City | 145%
Unincorporated UGA | 120%
Total | 131%
Draft Results: Predicted Buildable Density Results

Actual minus Predicted Buildable Density (for All Developments)

- Predicted Buildable Density too high: 37%
- Predicted Buildable Density too low: 63%
Draft Results: Predicted Unbuildable Acres Results

2012 BLR predicted unbuildable acres were within ½ acre of actual unbuildable acres for 75% of 2013-2018 development projects.

1. What Development occurred?
2. How well did the land classification of 2012 parcels predict the development that occurred?
3. How well are the market factor reductions performing compared to development between 2011-2018?
Used GIS and Database:

- Created database of the following:
  - County wide and jurisdictional zoning
  - Commercial, Residential, Multifamily, and Mixed-Use Development from 2011-2018
  - 2019 parcels
  - 2012, 2007, and 2002 BLI

All Results are still considered DRAFT
### New Development by Type (2012 parcels)

Development since 2012 BLR

Source: Snohomish County; ECONorthwest
What does the Guidance say?

- E2SSB-5254 requires that Counties improve the overall accuracy of their BLRs to account for changes in growth patterns, with specific emphasis on accuracy of estimating redevelopable lots.

- Identify Areas that are Candidates for Growth: Define vacant, partially-utilized and redevelopable lands that can potentially accommodate additional capacity.
What is the existing methodology for redevelopable land classifications?

- Single family redevelopable:
  - Existing houses valued at less than $100,000 and 75% of the land value

- Multifamily, commercial, industrial or mixed use:
  - Existing buildings valued at less than 100% of the land value

The results of initial land classifications are reviewed and finalized following aerial photo review and field visits.
What are the potential approaches?

- Change the improvement value threshold
- For multi-family zoned parcels, examine the building footprint of the buildable parcel area.
- For commercial, industrial, and mixed-use zones, the floor area ratio is usually less than 50% and the building improvement to land value ratio is greater than 100%.
What does the Guidance say?

- The Guidance provides considerations for updating market supply factors. These include:
  - Market demand when evaluating if land is suitable for development or redevelopment.
  - Market availability of land.
- The Guidance also notes that “Market Supply Factors can and should be distinct for different counties and cities.”
What is the existing methodology for market factor assumptions?

- 15% for vacant land
- 30% for under-utilized land

In comparison, other counties use the following ranges:

- Residential land
  - 0% to 50% for vacant land
  - 0% to 50% for under-utilized land

- Employment land
  - 0% to 20% for vacant land
  - 0% to 40% for under-utilized land
What are the potential approaches?

- Adjustments to Market Supply Factors for land classifications
- Different Market Supply Factors for the Metro UGA’s vs Non-Metro UGA’s
What does the Guidance say?

- The Guidance provides a series of questions to determine whether infrastructure gaps exist including:
  - Is there a long-term lack of urban development in the area?
  - How did the recent comprehensive plan address the needed infrastructure provision, and is that information still valid?
  - In the infrastructure is anticipated to be provided later in the planning period, is development likely to occur quickly so that the planned development is realized with the planning period, or will some of the area remain undeveloped?
What are the potential approaches?

- If a potential infrastructure gap is identified the County can work with the jurisdiction to verify.
- If the jurisdictions provide documentation of the rationale and conclude the infrastructure gap is likely to continue for the entire 20-year planning period, the affected area(s) are either:
  - Assigned reduced capacity in the BLR
  - Addressed through reasonable measures
What does the Guidance say?

If BLR shows:
- Planned densities not achieved
- Insufficient capacity
- Inconsistent development patterns (actual vs. assumptions in CPPs or CP.)

Perform analysis* to:
- Provide rationale and documentation (Guidelines provide specific questions to address for the three scenario.)
- Determine if reasonable measures are required or if rationale is sufficient

If reasonable measures are deemed necessary:
- Reasonable measures must directly align/remedy the issue identified ("reduce or reasonable mitigate").
- Identify timing of effect of measure.
- Adopt measure as part of CP, facilities plan, other local plan, code, or CPP (less common).

After implementation of measure:
- Optional: Evaluate performance of measure using pre-defined metrics and data collection methods.
What is the existing methodology for reasonable measures?

Appendix D of the Countywide Planning Policies (CPPs) states:

“In UGAs where a consistency problem has been found (e.g. not achieving urban densities or a lack of sufficient capacity), GMA (RCW 36.70A.215) and Countywide Planning Policy GF-7 direct cities and the county to consider “reasonable measures,” other than expanding Urban Growth Areas (UGAs) to resolve the inconsistency.”
What are the potential approaches?

- Determine threshold for requiring reasonable measures
- Provide rationale and documentation when reasonable measures may be required
- Assign categories that align with Guidance for ease of implementation
# Reasonable measures matrix (handout provided)

## Reasonable Measures List - Proposed Updates (DRAFT – November 4, 2019)

</tr>
</tbody>
</table>

| Measures that increase Employment Capacity | | | |
| Develop an Economic Development Strategy | | | |
| Create Industrial Zones | | | |
| Zone areas by building type, not by use | | | |
| Develop or strengthen local brownfields programs | | | |

Suggested metrics to add:

- Planned Densities not Achieved
- Insufficient Capacity
- Inconsistent Dev. Patterns
- Estimated time to develop and adopt (Short, medium, long term)
- Scale of impact once implemented
## Reasonable measures matrix continued

Potential Evaluation Criteria

Alternative approaches and updates to the methodology will be evaluated based on:

- Ease of implementation
- Access to data
- Alignment with DOC Guidance
- Empirical evidence
Small Group Discussion
In small groups of 5-6 people discuss the following:

1. What are you most concerned about related to potential updates to the buildable lands methodology?
2. What other types of information should be considered as part of the market factors research?
3. When, how, and where should infrastructure gaps be considered for reasonable measures and/or reduced capacity?
4. What additional reasonable measures might we consider?
5. What concerns do you have about land capacity planning relative to targets (i.e. capacity in places not meeting growth targets)?
Next Steps
After this meeting the Buildable Lands Team and ECONorthwest will:

- Continue to meet with the SCT PAC Subcommittee
- Develop a draft report by December 2019
- Present to elected officials in early 2020 (SCT Steering Committee)
- Complete final report by February 2020
